## Why use bare root perennials for your perennial production?

- Our Bare Roots will generate a bigger, stronger plant in a shorter time, compared to many liners.  
This will directly decrease production costs and increase profitability of your perennial production.
- All our Bare Roots are quality products, true to name and proven to perform.  
This will minimize product losses during your production process.
- Bare Roots are stored dormant, which allows for, varied delivery dates of vernalized stock.  
This makes your production very flexible.
- All our Bare Roots are shipped as a dormant, cold stored crown so you can be certain the cold requirement has been met.
- Bare Roots can tolerate lower temperatures after planting than many greenhouse-produced plugs or liners.  
This directly leads to savings in your production process.

## Patent Protected Plants

The terms PPAF, PP# and EU# refer to various plant protection rights attached to the specific plant variety. Breeders have spent many hours and often years creating these varieties and have rightfully protected them in law against non-authorized propagation. Please ensure that you don't further propagate these varieties as this is both prohibited and can result in prosecution with serious penalties and fines.
